

CONTROL PANELS

JA-107K

The JA-107Ks are the highest series of control panels of the JABLOTRON 100+ system. They are ideal for large fully professional smart installations. The wide selection of programmable outputs, peripherals, number of users and flexibility of calendar actions opens the possibilities for installations in public buildings like schools, companies or shops.

The control panels have in-built LAN communicators and optional GSM and radio modules for communication with users or surveillance and alarm receiving centres. A memory card is included and is used to store events, voice messages and pictures. Control panels are configured using updated F-Link software that offers easier maintenance, day/night mode or repeated calendar events. The mobile and web applications that allow you to remotely control the device online are an integral part of the solution.

Product code	JA-107K
Product name	Control panel with LAN communicator
Dimensions	357 x 297 x 105 mm
Number of sections	15
Number of users	600
Number of peripherals	120 wireless / up to 230 BUS
Calendar events	64
Number of programmable outputs	128
Number of reports per user	50
Number of configurable ARCs	4
Number of bus terminal boards	2; third bus can be attached by JA-110Z-D
Communicators	built-in LAN; GPRS/GSM can be purchased as the JA-192Y module
Radio module	NO
Power supply	110 - 230 V / 50 - 60 Hz
Backup battery	1x SA214-18 - battery is not included in the product package
Backup bus supply	for 18 Ah battery for 12 hours at maximum of 1.1 A with active LAN
